

Fossil Fuels

I had originally assumed that Yih would not have coal or oil deposits since I assumed that required very specific biological factors (absence of certain decomposers allowing organic matter to form fossil fuels). After a little wiki walk it seems that it's mostly a question of time, heat, and a lack of oxygen. Yih and Earth are about the same age, and since Yih's biosphere (present and past) is like Earth unless noted, I'll go ahead and give our space tree doggos some Texas tea.
