

# 3D printed Female Forepaw and Wind Fruit

Image

I got some white filament today and decided to test out multicolor printing. This is a female forepaw print, as well as a wind fruit a printed a few days ago.

Note the obvious polygons on the wind fruit. I know now that "shade smooth" in Blender doesn't mean "print smooth".

It's a good thing PLA a biodegradable bioplastic because 3D printing produces a ton of waste.
