

Moonlitter Symbol

Image

Here's a symbol for Moonlitter, a large circle with six smaller circles orbiting around it, symbolizing the planet Moonlitter itself and its many many moons and outlying dwarf planets.

The planet itself isn't very economically important other than being the big lump of mass that keeps all the moons together. There are a few sky cities in the planet's atmosphere, but it doesn't have the exploitable gasses that Welkinstead has.

Since I've been thinking of Moonlitter as the Taiwan of focus, I think they need something like the [Silicon Shield](#)
